-2026 edition-

Free Practice
*For the TOEFL®
Speaking Section 2026*

Listen and Repeat

Directions: You will listen as someone speaks to you. Listen carefully and then repeat what you have heard. Depending on the length of the statement, you will have 8 to 12 seconds to repeat the statement. On test day, no time for preparation will be provided.

When you are ready, continue to the next page to start.

**Note that when practicing at home, you may use speech-to-text software to check the accuracy of your statements.*

#1

 You are welcoming new employees to the office kitchen. Listen to the speaker and repeat what they say. Repeat only once.

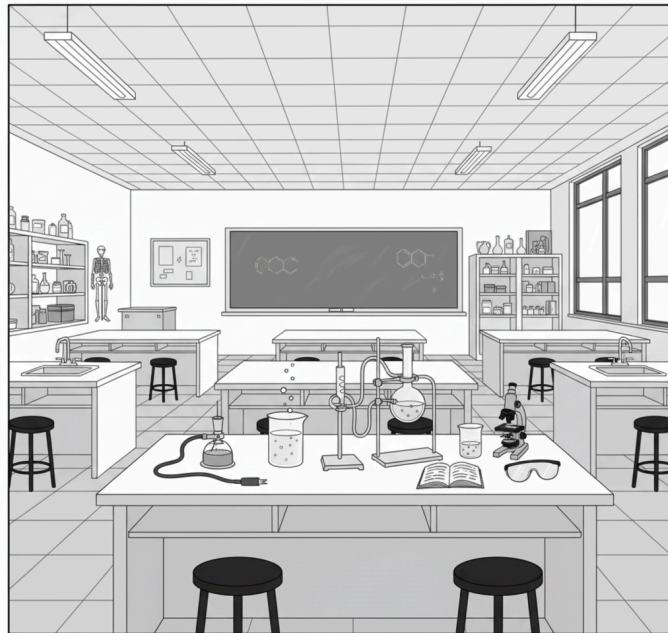

1. Listen and repeat only once. 
2. Listen and repeat only once. 
3. Listen and repeat only once. 
4. Listen and repeat only once. 
5. Listen and repeat only once. 
6. Listen and repeat only once. 
7. Listen and repeat only once. 

#2

 You are welcoming students to the science lab. Listen to the speaker and repeat what they say. Repeat only once.

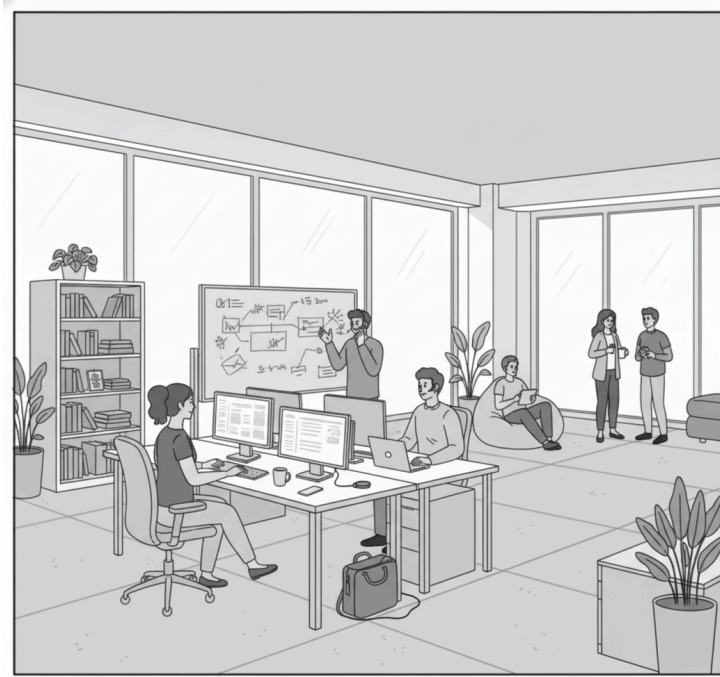

1. Listen and repeat only once. 
2. Listen and repeat only once. 
3. Listen and repeat only once. 
4. Listen and repeat only once. 
5. Listen and repeat only once. 
6. Listen and repeat only once. 
7. Listen and repeat only once. 

#3

 You are welcoming a new team member to the shared workspace. Listen to the speaker and repeat what they say. Repeat only once.

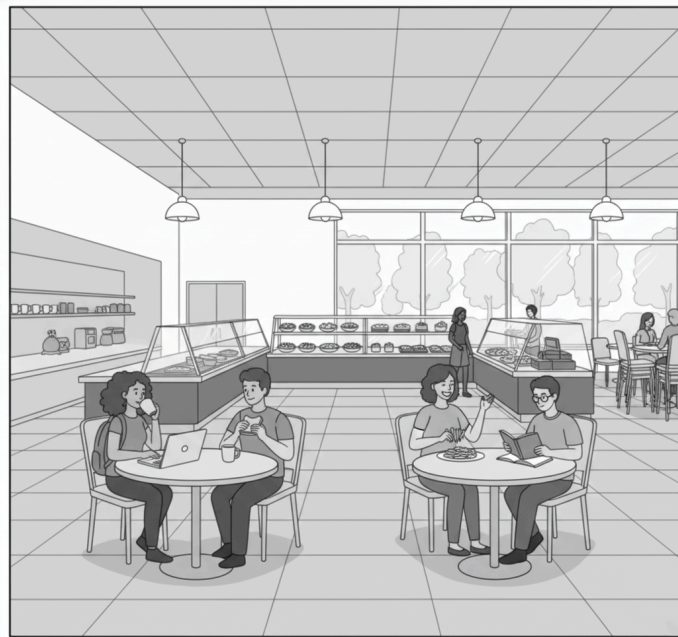

1. Listen and repeat only once. 
2. Listen and repeat only once. 
3. Listen and repeat only once. 
4. Listen and repeat only once. 
5. Listen and repeat only once. 
6. Listen and repeat only once. 
7. Listen and repeat only once. 

#4

 You are introducing new students to the campus cafeteria.

1. Listen and repeat only once. 

2. Listen and repeat only once. 

3. Listen and repeat only once. 

4. Listen and repeat only once. 

5. Listen and repeat only once. 

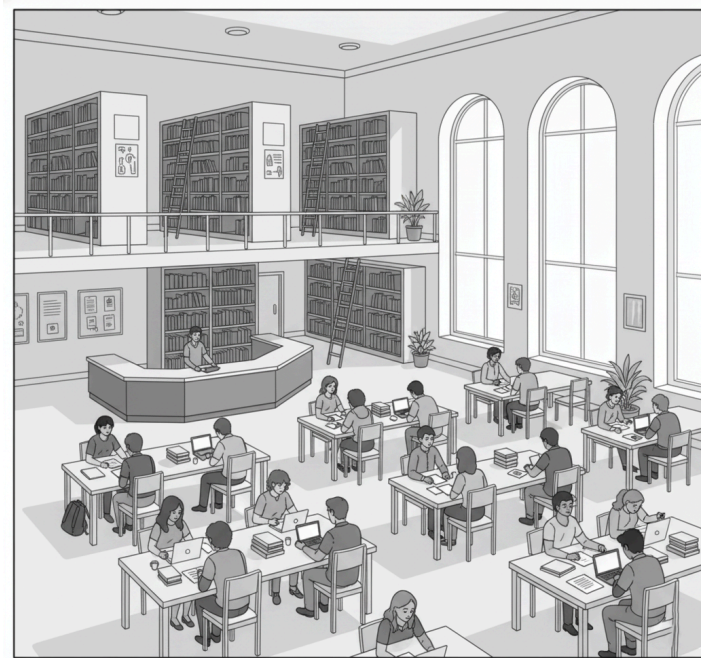

6. Listen and repeat only once. 

7. Listen and repeat only once. 

#5

 You are explaining the layout of the university library to new students. Listen to the speaker and repeat what they say. Repeat only once.

1. Listen and repeat only once. 

2. Listen and repeat only once. 

3. Listen and repeat only once. 

4. Listen and repeat only once. 

5. Listen and repeat only once. 

6. Listen and repeat only once. 

7. Listen and repeat only once. 

Take an Interview

Directions: On test day, you will be asked four questions and have 45 seconds to respond to each. You will not be given any time to prepare. Please answer the interviewer's questions.

#1

 You have agreed to participate in a research study about teamwork. You will have a short online interview with a researcher. The researcher will ask you some questions.

1. 

Please speak for up to 45 seconds after the question has been read.

2. 

Please speak for up to 45 seconds after the question has been read.

3. 

Please speak for up to 45 seconds after the question has been read.

4. 

Please speak for up to 45 seconds after the question has been read.

#2

 You have agreed to participate in a research study about how students manage their time. You will have a short online interview with a researcher. The researcher will ask you some questions.

1. 

Please speak for up to 45 seconds after the question has been read.

2. 

Please speak for up to 45 seconds after the question has been read.

3. 

Please speak for up to 45 seconds after the question has been read.

4. 

Please speak for up to 45 seconds after the question has been read.

#3

 You have volunteered for a research study about people's environmental habits. You will have a short online interview with a researcher. The researcher will ask you some questions.

1. 

Please speak for up to 45 seconds after the question has been read.

2. 

Please speak for up to 45 seconds after the question has been read.

3. 

Please speak for up to 45 seconds after the question has been read.

4. 

Please speak for up to 45 seconds after the question has been read.

#4

 You have volunteered for a research study about students' study habits. You will have a short online interview with a researcher. The researcher will ask you some questions.

1. 

Please speak for up to 45 seconds after the question has been read.

2. 

Please speak for up to 45 seconds after the question has been read.

3. 

Please speak for up to 45 seconds after the question has been read.

4. 

Please speak for up to 45 seconds after the question has been read.

#5

 You have agreed to participate in a research study about technology in daily life. You will have a short online interview with a researcher. The researcher will ask you some questions.

1. 

Please speak for up to 45 seconds after the question has been read.

2. 

Please speak for up to 45 seconds after the question has been read.

3. 

Please speak for up to 45 seconds after the question has been read.

4. 

Please speak for up to 45 seconds after the question has been read.

Free Practice 2026
For the TOEFL® Speaking Section
Answer Key

Listen and Repeat #1

1. Welcome to our office kitchen and break area.
2. You can store your lunch inside the refrigerator.
3. Please label your food so everyone knows who it belongs to.
4. The coffee maker and microwave are available for everyone to use.
5. Remember to clean up after yourself and leave the counters tidy.
6. We keep extra cups and utensils in the cabinets above the sink.
7. At the end of the day, check that all appliances are turned off and the trash has been taken out.

Listen and Repeat #2

1. This is our school's science laboratory.
2. Each workstation is equipped with a sink and supplies.
3. Please keep your bags and books away from the lab tables.
4. Safety goggles and gloves are stored in the cabinet near the door.
5. Before starting an experiment, make sure all equipment is clean and ready to use.
6. Never eat or drink inside the lab, even when no experiments are being performed.
7. When class ends, turn off the gas burners and leave your station tidy for the next group.

Listen and Repeat #3

1. This is our shared office space.
2. You can choose any open desk to work at.
3. The whiteboard area is used for team discussions and planning.

4. Please keep your conversations quiet while others are working nearby.
5. Coffee and snacks are available in the lounge behind the glass doors.
6. We often hold short brainstorming sessions in the afternoons to share ideas.
7. Feel free to collaborate with others, but remember to schedule meeting times so everyone can stay focused.

Listen and Repeat #4

1. This is the main cafeteria on campus.
2. You can order food at the counter near the back.
3. The salad bar and dessert section are along the side wall.
4. Please return your dishes and trays after finishing your meal.
5. During busy hours, try to share tables so everyone has a place to sit.
6. Many students like to study here because the space stays open until midnight.
7. If you are looking for vegetarian options, check the daily menu posted near the entrance.

Listen and Repeat #5

1. Welcome to the main library on campus.
2. The front desk is where you can borrow and return books.
3. Study tables are available on both the first and second floors.
4. Please keep your voice down so others can concentrate.
5. Computers in the basement are connected to the library database for research.
6. If you need help finding a book, ask the librarian at the desk for assistance.
7. Group study rooms can be reserved online, allowing students to collaborate without disturbing others.

Take an Interview #1

1. Thank you for speaking with me. Let's begin with something simple. Have you worked on any group projects at school? What kind of tasks did your group have to complete? For example, did you have to create a presentation, do research, or give a speech?

Sample Answer

 Yes, I've done several group projects, but the one that stands out was in my second-year mechanical design class, which was kind of like a robotics class, basically. My team had to build a small robot that could follow a line on the ground and avoid things on the floor. I was in charge of programming the sensors, while others worked on the frame and the wiring. We spent weeks in the lab testing and fixing things that didn't work. In the end, our robot actually won second place in a campus competition, which felt amazing. That project taught me how much communication and patience matter when people have different ideas but share the same goal.

2. That sounds interesting. When you work in a group, do you prefer to take the lead or follow directions from others? Why?

Sample Answer

 Hmm, that's a good question. I guess I usually prefer to take the lead when I work in a group. It's not because I want control, but I like organizing things and making sure everyone knows what to do. When no one takes charge, people end up talking in circles and nothing gets done. During my robot project at university, for example, everyone had strong opinions about the design, and it started to get messy. I decided to step up and make a schedule that divided the work fairly. After that, things finally started to move forward. I don't mind listening to different opinions, but I've learned that sometimes someone just has to take charge so the team can make progress.

3. *I see. Many universities encourage teamwork to prepare students for professional life. Do you think group projects will become even more common in education in the future? Why or why not?*

Sample Answer

 Yes, I think they definitely will. In almost every job these days, you have to work with other people, so universities are trying to help students build those skills early. In my department, group work used to be limited to a few classes, but now almost every course has at least one project that requires teamwork. I think it makes sense, because technology is making work more connected. I learned in one of my classes last semester that engineers in different countries can work on the same design through shared software, so being able to communicate and cooperate is essential. Even though group projects can be frustrating sometimes, they prepare you for what real workplaces are like.

4. *That's a good point. Finally, some people believe teamwork helps people develop communication skills. Do you agree with this idea, or do you feel teamwork slows down individual progress? Explain why you think so.*

Sample Answer

 I completely agree that teamwork improves communication skills. When I first started university, I wasn't very comfortable speaking in English during group discussions. I was always worried about making a mistake or sounding stupid, but working with classmates changed that. In one project, I had to explain my code to an exchange student from Germany who didn't understand Korean, so I had to find simple words and be patient. Over time, we got to know each other and became good friends because we had the shared experience of lacking confidence in English. It's funny, actually, that shared insecurity made it even more fun to communicate. I still like working alone sometimes, but I know that without teamwork, I wouldn't have learned how to work through difficult times.

Take an Interview #2

1. *Glad to have you here. Let's start with your daily routine. When you have a busy day, how do you usually organize your schedule? For example, do you use a scheduling app on your phone, a printed calendar, or do you try to remember everything on your own?*

Sample Answer

 When my day gets busy, I rely completely on my phone to stay organized. I use Google Calendar for appointments and the Notes app for my daily tasks. Between my job at the pharmacy and taking care of my kids, there's no way I could remember everything on my own. For example, on school mornings, I check my phone right after breakfast to see what I have lined up, maybe a doctor's appointment for my daughter or a delivery coming to the pharmacy. I also set small reminders, even for simple things like picking up groceries or calling a friend back. It makes my day feel smoother and less stressful. I think it makes sense to use technology because life just moves too fast to keep everything in your head.

2. *I understand. Let's move on and discuss scheduling for the future. Do you like to make a lot of appointments and have a busy schedule, or do you prefer to limit scheduled meetings and keep your days open?*

Sample Answer

 I definitely prefer to keep my days a little open. When I first moved to the U.S., I tried to plan every hour because I wanted to stay on top of everything, things like work and school, and chores, but I ended up feeling exhausted. The main reason I prefer a lighter schedule now is that I need flexibility. For example, sometimes one of my children gets sick or my husband's work schedule changes, and I have to adjust my plans quickly. Having too many appointments makes that impossible. So I still plan the important things, like deadlines and meetings, but I also leave time to rest or just sit with my family in the evening. I've learned that being constantly busy doesn't always mean being productive.

3. *These days, many people say they struggle to focus because of smartphones and social media. Do you think technology helps us manage time better? Or does it mostly create distractions?*

Sample Answer

 I think it depends on how we use it, but for most people, it creates more distractions than it solves. I see that in my own life. The main reason is that phones mix work and personal things together, so it's hard to separate them. For example, I might open my phone to check my pharmacy schedule, and then I notice a message from my sister in Egypt or a new post from a friend. Ten minutes later, I'm still scrolling and completely forget what I wanted to do. At the same time, I can't deny that some apps help me stay organized. I guess technology is fine in small amounts, but too much can take away your focus and energy.

4. *You've made some good points. Finally, some people believe being busy is a sign of productivity. Do you agree with this idea, or do you think people are more productive when they have downtime? Explain why you think so.*

Sample Answer

 I don't believe being busy always means being productive. When I was younger, I used to think that if I filled every minute, I was doing well. But after moving here and starting a new life, I realized that constant activity can actually make you less effective. For example, last year I was studying for my pharmacy license while working part-time and taking care of my kids. I hardly took any breaks, and eventually I started making mistakes at work because I was exhausted. After that, I began giving myself short breaks during the day—just a walk outside or a cup of tea—and I noticed my focus improved. I think people do their best work when they have time to breathe and clear their minds.

Take an Interview #3

1. *Thanks for joining me. Let's start off by discussing the environment. What kinds of environmentally friendly actions do you or your family take at home? For example, do you recycle, use a bicycle, or try to conserve water at home?*

Sample Answer

 At home, my family and I try to be as environmentally friendly as we can. The first thing we focus on is reducing waste. We recycle plastic, glass, and paper every week, and we try to avoid using paper plates or cups. Actually, when my parents visit from India, they always laugh because we use cloth napkins instead of paper ones. Another small thing we do is save water. I turn off the tap when I brush my teeth, and I only run the dishwasher when it's full. It's nothing huge, but I think it makes sense that small daily habits can add up over time. Living in Toronto also helps because the city makes recycling really easy, so it feels natural to do it.

2. *Okay, that makes sense. If you had to choose, would you rather live in a city that focuses on reducing pollution or one that invests more in public parks and green spaces? Why?*

Sample Answer

 That's a tough choice, but I'd probably choose a city that invests in green spaces. The main reason is that parks make a city feel alive and healthy. When I first moved to Toronto, I lived near High Park, and I used to go for walks there almost every evening. It wasn't just about the nature itself but also the people, the families, the joggers, and the kids playing soccer. Green areas make people want to be outside, and that creates a cleaner, more balanced environment overall. Of course, reducing pollution is important too, but I think if a city invests in parks and trees, it naturally helps the air quality and people's mental health at the same time.

3. *That's a thoughtful answer. Many cities now promote bike-sharing and public transportation to cut emissions. Do you think more people will actually choose these options in the future? Why or why not?*

Sample Answer

 I think more people will start using them, but change takes time. The main reason is that people need convenience. If bike-sharing stations and buses are easy to access and safe to use, then people will make the switch. For example, in Toronto, there's a program called Bike Share, and I use it sometimes to get to work when the weather is nice. It's cheaper than driving, and I avoid sitting in traffic. But I also notice that during winter, hardly anyone rides because it's just too cold and slippery. So I think it depends on how well the system fits people's daily lives. The idea makes sense, but cities have to keep improving safety and accessibility before everyone will use it regularly.

4. *Interesting. Let's wrap up with this: some people believe that individual efforts, like recycling, make a real difference. Do you agree with this idea, or do you think that only governments can solve environmental problems? Explain your answer.*

Sample Answer

 Hmm, that's a hard question. I guess I'd say individual actions do make a difference, even if they seem small. When people start changing their habits, it creates a kind of ripple effect. For example, when I first came to Canada, I wasn't used to sorting my trash into recycling and compost. At first, it felt like extra work, but after a few weeks, it became a habit. Now, when friends visit me from India, they automatically copy what I do because they see it's normal here. That small change keeps spreading. I think governments play a big role in setting the rules, but if people don't actually follow them, nothing changes. It really starts with individuals doing their part.

Take an Interview #4

1. *Thank you for participating in our study. I'd like to start with a question about your study habits. When you study, do you prefer to work alone or with classmates? Why?*

Sample Answer

 Hmm, that's a good question. I used to really enjoy studying with classmates, but over time I realized I focus better when I'm alone. When I'm by myself, I can control my pace and take breaks when I need them. For example, last semester, my friend Camila and I studied together for our accounting midterm, and we spent almost two hours talking about random things instead of reviewing formulas. I ended up having to restudy everything the next day. When I study alone, I can make short summaries and repeat key points out loud, which helps me remember better. Still, I like meeting friends right before the exam to quiz each other or review tough topics, because explaining ideas to someone else helps me check if I really understand them.

2. *I see. When you prepare for an exam, do you usually study in short sessions over several days, or do you prefer to study for long hours right before the test? Why?*

Sample Answer

 To be honest, I usually end up studying for long hours right before the test. I always tell myself I'll start early, but somehow I never do. I think it's because I focus best under pressure. For example, during finals last semester, I stayed up late two nights in a row reviewing my economics notes with a big mug of coffee next to me. I felt completely exhausted the next morning, but I remembered the material surprisingly well. I think short study sessions are better in theory, and some of my classmates swear by them, but I need that last-minute rush to really concentrate. Still, after every exam, I tell myself I'll try a different method next time, because cramming definitely isn't the healthiest approach.

3. Interesting. Next, I'd like to get your opinion. Many students today use digital flashcards and apps to memorize information. Do you think that in the future, technology will completely replace traditional study methods like taking notes by hand? Why or why not?

Sample Answer

 That's an interesting question. I don't think technology will completely replace traditional study methods, even though it's becoming a bigger part of learning. For quick review, apps like Quizlet or Anki are really convenient, and I use them often on the bus or between classes. But when I really need to understand something deeply, I still prefer to write it by hand. For example, when I was preparing for a statistics exam, I copied formulas again and again in my notebook, and that repetition helped me memorize them much faster. Writing forces me to slow down and think about what I'm learning. Also, screens can be distracting. Sometimes I open my phone to study and end up checking messages instead. So I think it makes sense to combine both methods.

4. Good points. I just have one more question. Some people say that developing good study habits is more important than having natural intelligence. Do you agree with this idea? Explain why you think so.

Sample Answer

 Hmm, I'd say I agree with that idea. I've seen many students who are naturally smart but don't have the discipline to study regularly, and they often fall behind. On the other hand, my friend Lucas is a great example of the opposite. He's not the fastest learner, but he's incredibly consistent. Every afternoon he spends at least an hour reviewing his notes and making little flashcards. I remember during our business law course, I struggled to remember all the terms, but he stayed calm because he had reviewed them gradually over time. In the end, he got one of the highest scores in the class. That made me realize that intelligence helps, but habits build results.

Take an Interview #5

1. *Thank you for your participation. I'd like to ask you a few questions about how you use technology. What kind of digital devices do you use most often in your daily life? For example, do you mostly use a smartphone, laptop, or tablet?*

Sample Answer

 Let me think for a second. Well... I guess I use my smartphone the most. It's kind of my main tool for everything these days. I check class announcements, chat with friends, and even pay for meals with it. I also use it to watch short videos between lectures, which I admit is not always a great habit. My laptop is still important for assignments and coding projects, but I probably spend more hours on my phone overall. For example, I have this fitness app that reminds me to drink water and take breaks during study sessions. I think it makes sense that my phone has become such a big part of my routine because it's small, convenient, and does almost everything.

2. *I see. When you use technology to communicate, do you prefer to send text messages or make voice or video calls? Why?*

Sample Answer

 Hmm, that's an interesting question. I guess I usually prefer texting. It's quicker, and I can reply whenever I have time, even during class or while commuting. For example, my friends and I have a group chat for our senior project, and we share updates there throughout the day. It keeps things organized because I can scroll back and check what we said earlier. If I called them instead, I may not remember what we discussed. Still, sometimes a short call saves time when we need to make a fast decision. I don't do many video calls unless it's with my parents. They live in Busan, and they like to see my face once in a while, so we do a video call on weekends, but I pretty much text everyone else.

3. Interesting. Next, I'd like to get your opinion. Many people say that artificial intelligence will soon become part of everyone's daily routine. Do you think that in the future, AI will make life easier or more complicated? Why?

Sample Answer

 I think artificial intelligence will make some things easier, but life overall might get more complicated. The first reason is that people will start depending on it too much. For example, in one of my classes, we tried using an AI program to write short bits of code. It was fast, but some students stopped thinking through the logic on their own. It made the project quicker but also a bit empty. You kind of have to go through the hard work of figuring out simple code first so you can understand when the AI does something wrong. I think it makes sense that technology will save time, but it might also make people less creative. In the end, if we stop solving problems ourselves, we could lose the skills that make us human.

4. Good points. I just have one more question. Some people believe that modern technology helps people connect, while others say it causes isolation. Which view do you agree with, and why?

Sample Answer

 Hmm, I'm not completely sure which side I'm on, but I think technology does both. It connects people in ways that weren't possible before, but it can also make relationships feel shallow. For example, I talk to my high school friends online almost every day, but it's not the same as seeing them in person. We share memes and quick updates, but I don't always feel close to them anymore. When I visit my hometown, just sitting together at a café feels different. We get to spend time together on a deeper level, read emotions through eye contact, and just gain a deeper appreciation for each other, which is impossible to duplicate online. Online conversations are convenient, but sometimes they remind me how far apart we really are.
